Flowchart for Non-problematic Patients at BP Screening

Students (2) explains to potential patient what the purpose of BP check is at market

If potential patient agrees, student hands them a survey with waiver and gets contact information. Patient starts to fill out their information while waiting for BP check

After/during survey survey, patient is sent to BP station (depending on wait). There is a total of two stations (1 student/table with preceptor or 3rd year float)

Patient goes to exit table and is given information about diet and nutrition by student that gave BP and referral packet if needed

Patient has BP taken and finishes with survey if needed if they are in no medical danger. (If there is an issue, preceptor takes over with student assist)
